

NESA Tracking - Hardwired GPS/4G Tracker

NESA-HW4G

Powered by
fleetminder[®]

Whether it be for personal vehicle security or small business vehicles to track mileage and trip reports, the NESA Tracking HW4G is a compact and discrete GPS tracking module for 24/7 monitoring of your vehicle using the 4G network. The NESA Tracking platform offers 24/7 security provided via Geo-fence alerts if your vehicle is moved from a set location. If installed with an optional relay, a simple click of a button will disable the vehicles starter motor for added anti-theft security*. When the key is on, the location and speed is reported every 60 seconds or at each corner, whichever comes first and a history of every trip is kept online for 6 months.

The NESA-HW4G uses a 4G SIM card on the Telstra network (pre-installed in the device) to transmit to the NESA Tracking 256bit secure servers. The first 12 months tracking subscription is included. You can access the tracking online via the NESA Tracking website or via the included NESA Tracking mobile app when you are on the move. As the NESA-MT4G operates on 9v to 90v, it is compatible with any vehicle, including: cars, motorcycles, vans, utes and trucks, and even e-scooters and e-bikes.

Hardware Specifications

- 4G Telstra network communications
- Internal GPS receiver
- 1 minute logs
- Power saving sleep mode uses less than 2mA of power
- Fast wakeup: ~32s Cold start
- Built in G-Sensor for movement and harsh driving
- Backup battery: 3.7v - 150mAh (6-8 hours of use)
- Remote output for optional relay for starter kill*
- Simple 3 wire installation
- Weight: 48.5g
- Power: 9v~90v
- Compact size measuring 80mm/34mm/16mm [L/W/H]

NESA Tracking Subscription Features

- First 12 months tracking included*
- Real time vehicle management via App or Web Portal
- Monitor vehicle 24/7
- Programmable alerts
- Harsh driving/harsh acceleration/crash sensor alerts
